Table I.2

The social value of the broad version of the end-to-end arguments.

The End-to-End Arguments and Their Relationship to the Internet's Original Architecture	Pages
What are the two versions of the end-to-end arguments, and why should we distinguish between the two?	57–81, 377–379
How have they shaped the Internet's original architecture?	90–103, 110–112, 373–381
The Effect of the Broad Version on Application Innovation	**Pages**
How does the broad version affect the cost of developing new applications?	137–148, 383–387
How does the broad version affect who can develop new applications?	204–213
Can innovators with no or little outside funding really produce successful applications?	204–213, 300–308, 334–345
How does it affect independent application developers if network providers can control the applications on their network?	215–281
Do network providers have an incentive to discriminate against or exclude unaffiliated applications?	218–273
Does competition among network providers remove this incentive?	255–264
What pricing strategies can network providers follow in a network where they control the applications?	217–218, 273–280
How does the economic environment for application innovation change if networks deviate from the broad version?	285–295, 383–387
How do differences in the size and diversity of the innovator pool and differences in control over application innovation and deployment affect the overall amount, quality, and type of innovation?	297–351
How important is it if innovators other than the network provider can independently choose their approach to innovation?	345–348
How important is user choice for application innovation?	349–351
How do the architectural differences among network architectures that are based on the broad version or deviate from it, taken together, affect the overall amount, quality, and type of application innovation under these architectures?	351–353
The Social Value of Network Architectures Based on the Broad Version	**Pages**
What are the social benefits associated with the broad version?	355–365
How important is application innovation?	355–360
How important is user choice?	349–351, 361–363
How does the broad version affect the Internet's ability to realize its political, social and cultural potential?	364–365
What are the social costs associated with the broad version?	365–368
How should we trade off among the social benefits and social costs?	368–371
Do network providers' private interests diverge from the public interest?	371–375
Policy Implications	**Pages**
What do these insights mean for public policy?	218–221, 264, 272–273, 387–392
Should legislators mandate compliance with the broad version?	388
